

Township Supervisor Steve Kaplan and Kris D'arcy,

Thank you so much for taking your valuable time to see me today. I have included excellent videos and articles for your personal and/or professional use and information. The following was a document that I produced with articles and videos from months of research and vetting for our county commissioners. May I suggest an excellent unbiased news source? Epoch Times, NTD news online. Also, using the "Duckduckgo" app will generate more information than politically biased and censored google searches.

These same concerns were brought to the U.S. Representative Haley Stevens of the 11th district TOWN HALL meeting on March 23rd. None of the concerns were allowed to be voiced. I am very concerned regarding the type of questions and community concerns that actually were allowed to be brought to the table. Instead of allowing the public to freely ask questions, a moderator from Steven's team chose the questions. One community member asked, "*What are we going to do about the vaccine-aversion people in our community?*" --as if it has ever been federally mandated to take a vaccine, let alone an experimental gene-therapy vaccine with no human trials. Haley Stevens said, "We are going to get them educated." Very concerning. There was no contrasting information allowed to be presented. The community must have access to all information to make an informed decision.

These are the questions I asked the Commissioners:

I have questions regarding the Restaurant Relief program, specifically the \$1M allocation for Covid contact tracing software. An update was posted yesterday March 10, on the county website that drew my attention to this. It was originally posted on Dec 3rd, 2020. Here is the

article: <https://www.oakgov.com/Pages/news.aspx#/oakland-together-restaurant-relief-program-gives-10-million-additional-boost-to-local-businesses>

1. What capabilities does the software have? Where does our personal information go? Who collects it? Could the details of the software be put on your website for public research?

- FYI: England just put out a report that they spent 37 billion pounds on a test and trace system that has not made a clear impact on the spread of the virus. Article post 3/10/21 by Neil Woodlow on NTD news. https://www.ntd.com/committee-impact-of-37-billion-pound-test-and-trace-system-is-unclear_579364.html

2. Is this software required for businesses? Or optional? Will it be required for businesses and schools to open 100%? This is a terrible imposition on our local businesses and their patrons. What a dangerous imposition on our community children/teens/college-age students.

- Personal story. Right now, in order for my neighborhood salon to be open, a 23-year-old stylist with zero medical training, triages me on the front step of the salon, taking my temperature, taking my health status, writing down and submitting my answers to some undisclosed entity. The same protocol was required to enter my county building. Triage belongs in my doctor's office. Where are our HIPPA and civil rights and privacy honored with this?

3. Is this software in any way the next step before Covid passports are required as are being used in NY? Where a covid tracing phone app must be used as a passport to get into arenas and large gatherings and businesses with proof of having taken the still experimental immunization and proof of covid test. See link: https://www.ntd.com/new-yorkers-react-to-new-covid-passport_576631.html and https://www.ntd.com/new-york-officially-launches-covid-19-vaccine-passport_588485.html

- Think of the restrictions on those who cannot take the vaccine or choose not to take part in the experiment of the vaccine (still not approved by FDA and did not have human testing before release to the public). People with autoimmune issues (like me) or who choose not to get the vaccine could be restricted from entering food, government agencies to acquire Driver's Lic. flights, Grocery stores, schools, government services?

- Right now my son, a senior at Mike Ilitch School of Business, is prohibited from entering any building on Wayne State's campus unless he signs a document that he will be vaccinated with Covid-19 [gene therapy experimental] vaccine and take a covid test, plus health questions. He did not sign the document from the school's tracing software so he was not permitted to enter and thus could not meet with his business class team to do a project. So we are not too far from the passport. Many thousands of us have done our research and do NOT want to participate in taking the experimental gene therapy vaccine.

4. Has the board had access to unbiased and nonpolitically biased research and data regarding the vaccine to educate them so that they can make clear decisions for our county residents?

- Here is a very informative video on the vaccine with data. I have more information than this but this is an excellent presentation. SIMONE GOLD Ph.d. <https://www.bitchute.com/video/mHi1OuOulqNm/>
- Here is a Virologist of 30 years explaining the dangers of the vaccine on the immune system. He was interviewed on Fox News by Laura Ingrim and this is a longer interview from another news station
- **Virologist explains vaccine and the effect on immunity.** <https://thehighwire.com/videos/the-biggest-experiment-ever-done/>
- There is data collected from medical doctors (America's Frontline Doctors) that worked in the field on the front lines last year with clear data reports. The vaccine is not actually a vaccine. It is gene therapy. It was pushed through the FDA as emergency approval but is experimental at best at this point and has had no human trials. We are in the human trial. The results coming back could have a dramatic negative impact on our youth and require our informed and unbiased attention. Here is one of many examples of issues coming out: Denmark, Norway, Iceland, suspended AstraZeneca shots after blood clot reports. https://www.ntd.com/denmark-norway-iceland-suspend-astrazeneca-covid-shots-after-blood-clot-reports_580077.html
- A local Metro Detroit Hospital has recent P.E.T. scans and mammograms are also showing negative effects of the Covid-19 Vaccine. This information may never be public. (Inflammation/autoimmune responses)
- Henry Ford produced tests early last year showing effective treatments for Covid-19. Why experimentally vaccinate with gene therapy, when

a treatment is available, tested on infants to elderly, and is effective and safe? <https://www.henryford.com/news/2020/07/hydro-treatment-study>

5. 1 million was allocated in our County budget for this tracing software. Did residents or restaurants/businesses/schools from Oakland County ask for a COVID tracing system? How was the public involved in this decision?

6. Is the board informed and up to date on the actual impact of Covid-19, the numbers (the annual flu numbers were mysteriously nearly nonexistent last year. Fewer numbers of deaths in the state last year than the previous year. Covid has a 99.7% survival rate? Even less % for kids. Is this knowledge guiding them in their decision-making while our HIPPA and civil rights are eroded?

7. Does the board know that there are safe, tested, and successful FDA-approved therapeutic treatments available to the public that are effective and proven effective in the field safe for both infants and elderly? I have the treatment in my medicine cabinet right now in case my elderly parents need it in the future. Why do we need a vaccine if treatments are available? Something to consider for future decisions.

8. How does this software abide in any way by the HIPPA rights of our citizens? Our civil and constitutional rights have been eroded at every turn during the lockdowns and since the election. The more your board is informed on what is ok and not ok with us, the better they can make decisions on our behalf.

9. Has your board had the opportunity to consult P.P.E. legally approved court experts on masks and virus protection? Our State and National Covid task forces have NOT had a court-approved P.P.E. certified expert and that is a MAJOR oversight. Listen to the real experts in the video below video:

- Here is an excellent, informative video posted by military and Industrial/Hospital P.P.E. experts that are court-approved experts in their field: Tammy Clark and Kristen Megan. I have experienced

their presentation and have their contact info. I would be happy to put the board in touch with these experts for an educational consultation. See link https://youtu.be/veFZ_2dn9xs Title: "Sugar Free Sanity"

- The dangers of masks far outweigh their use, as they are completely ineffective according to actual virus PPE legal experts. Long-term health issues in kids from oxygen deprivation to the brain are just one effect. Bacterial infections in the lungs another. Psychological issues on children and our general community are severe. I know a young girl who has impaired vision after a major brain surgery that does not wear a mask. She was accosted by 7 customers at a local grocery store that encircled, surrounded, and trapped her with their carts and shouted at her until she was rescued by an employee. Is this the kind of community we want?

10. Will the county be paying attention to what and how other states are doing in opening up without Covid tracing, mask mandates? Will they be tracking that to see their success?

Thank you for your time and for any way you could address my questions.
